

# Copy & ~~click click~~...paste

## Click.to - the real copy & paste!

You press CTRL + C hundreds of times a day, but between copy and paste are far too many clicks? Now you can't find the correct target program, for better or worse? And all the while, your colleague has been complaining that you have already sent e-mails without attachments? These are all detours that cost; time, money, patience and energy.

Click.to is the true copy and paste. It brings a Smartphone feeling to the computer, desktop applications and web pages are turned into intelligent network components, all working together. Click.to furthers the Copy & Paste principle idea: With one click, you can find an unknown word with click.to Wikipedia or a technical article with click.to Google. Click.to can also quickly send screenshots to co-workers via email, or find an address in no time with Google Maps.

Click.to programs on your computer work together, making boundaries and barriers smaller. This will save you precious time and money. If you have tried click.to once, you'll never want to take the long route to your programs again.

### TechCrunch

It sounds a bit silly, but it's easy to get hooked on the app because of its sheer speed. Use it for a while and you'll find that you really do waste a lot of timing performing actions like opening an app and clicking a few times before you can actually share a file.

### lifehacker

Click.to pipes text and images from your clipboard into nearly any app or service ... it'll actually save you a good deal of the tedious clicking you do all day.
